PAGE 6

(continued) 8. HEALTH HAZARD DATA

> Bladder Effects: signs/symptoms can include more fraquent urination, blood in urine, lower abdominal pain, and painful urination.

Kidney Effects: signs/symptoms can include reduced urine volume, blood in urine and back pain.

Liver Effects: signs/symptoms can include yellow skin(jaundice) and tenderness of upper abdomen.

TF SWALLOWED:

Ingestion is not a likely route of exposure to this product.

Ingestion may cause:

Aspiration Pneumonitis: signs/symptoms can include coughing, difficulty breathing, wheezing, coughing up blood and pneumonia, which can be fatal.

OTHER HEALTH HAZARD INFORMATION: A 3M Product Toxicity Summary Sheat is available.

Abbreviations: N/D - Not Determined N/A - Not Applicable

The information on this Data Sheet represents our current data and best opinion as to the proper use and handling of this product under normal conditions. Any use of the product which is not in conformance with this run. Sheet or which involves using the product in combination with any other product or any other process is the responsibility of the user.

product

June 6, 1991

Below is a summary of the study data giving an indication of the relative toxicity of the product. (Definitions of test procedures are found on the reverse side of this sheet.) This summary is the data for the precentionary use information provided with the product.

Relative toxicity of a material is only one factor that is important in determining the degree of nazard in handling a chemical or product. Other considerations to include are physical properties of the chemical, extent and frequency of use or exposure, intended use, and possible misuse of the product. For additional information regarding safe handling of the product, please reference the Material or Product Safety Data Sheet.

22201-10

Supersedes May 16, 1991

ACUTE ORAL TOXICITY: PRACTICALLY MON-TOXIC. Undiluted PC-3537 was found to be practically non-toxic to rats, upon acute oral administration. The oral LD50 for rats was determined to be in excess of 5 grams/kilogram body weight. The acute oral test was run in compliance with the OZCD Guideline for Testing of Chemicals No. 401 "Acute Oral Toxicity."

ACUTE INEXLATION: The 4-hour inhalation LC50 (rat) of 0.5% FC-3537 solids in 0.35% ethyl acetate and 99.15% n-heptane was found to be approximately 60 mg/liter of air (or approximately 14,620 parts per million, measured n-heptane). A head-only exposure chamber was used. The material was administered as an "aerosol" using a spray nozzle. Ataxia, lethergy, tremors, and pulsatory respiratory were among the clinical observations. The main pathologic examination noted was a dark red discoloration of the lungs of the animals that died during or shortly after exposure. These results suggest that the acute spray inhalation toxicity of FC-3537 is relatively low, similar to n-heptane toxicity.

PRIMARY SKIN IRRITATION: MODERATE SKIN IRRITANT. Undiluted FC-3537 was found to produce moderate skin irritation in rabbits. The test was a 4-hour contact period with FC-3537 under semi-occlusion. Well-defined erythema and slight to very slight edema was present in 3/3 animals 40 minutes post-exposure. This reaction persisted in 3/3 animals to day 3 post-exposure. Well-defined erythema was still persistent 7 days post-exposure in 2/3 animals and had decreased to barely perceptible erythema in 1/3 animals. By day 14 3/3 animals showed barely perceptible erythema and very slight edema. The maximum primary skin irritation index was 3.0/8.0. FC-3537 was found to be moderately irritating to the skin as defined by Annex VI of the EEC Council Directive 67/58/IEC as amended by Directive 83/467/EEC. This test was run following the OECD Guidelines for Testing of Chemicals No. 404 "Acute Dermal Irritation/Corrosive."

EYE IRRITATION: MILD ETE IRRITANT. FC-3537 was found to be mildly irritating to the eyes of albino rabbits. One hour after exposure 3/3 animals presented with diffuse conjunctival redness and slight chemosis. Chemosis disappeared by 24 hours post-exposure. Conjunctival redness persisted in 2/3 animals until 72 hours post-exposure and 1/3 animals out to day 7. No adverse effects of the cornes or iris were present in any animals throughout the study. The maximum estimated Draize score of 6/110.0 (one-hour observation) classifies FC-3537 as a mild eye irritant on the scale developed by Kay & Calandra. FC-3537 is not an eye irritant as defined by Annex VI of the EEC Council Directive 67/548/EEC (amended by Directive 83/467/EEC). This test was conducted following the OECD Guideline For Testing of Chemicals No. 405 "Acute Eye Irritation/Corrosive."

(102-FC3537)

3M Protective Chemical Products Division

This information is intended to be used by a parson qualified to evaluate toxicological data, inquires are to be referred to Toxicology Services, Medical Department/3M, Building 220-2E, 3M Center, St. Paul, Mn 35144-1000, (612) 733-2882. The above information is based upon studies conducted by 3M and/or by recognized professional testing laboratories. It is believed to be correct, and it is supplied to others upon the condition that the person receiving it shall make their own determination of its suitability for their purposes.

2'09

Typical Application Procedure

- Silicone containing products generally cannot be used in the treating bath, as such material can severely affect oil repellency. All mixing and processing equipment must be free of silicones to avoid contamination of the solution. Use of silicones in earlier production steps and on the leather can contaminate the solution.
- . Some dyes may be sensitive to some solvents, and a slight to medium color change could result.
- The choice of the solvent, solvent grade or solvent blend influences the solubility and oil and water resistance of FC-3537.
- · Any proposed formula should be checked for compatibility, solubility, and performance.
- FC-3537 diluted in a ratio of 1:25 to 1:13 (1-2%) solids) is soluble in the following:

methyl isobutyl ketone n-heptane petroleum benzine (100–140) white mineral spirits isocctane diethylether 1,1,1-trichloroethane Wilson Suederleather E12/21/92 DDD

mixtures of: n-heptane/butyl acetate 30/70 n-heptane/ethyl acetate 30/70 n-heptane/isopropanol 70/30

General Application Recommendations

1. Aerosoi Container System:

FC-3537 can be packaged in pressurized aerosol containers for consumer application to suede and unfinished grain leathers.

Suggested formulas by weight:

- a) 2% FC-3537 13% Petroleum Benzine (100-140) 50% Ethyl Acetate 35% Dimethyl Ether (propellant) 100%
- b) 2% FC-3537 13% Petroleum Benzine (100–140) 55% Ethyl Acetate 30% Propane/Butane mixture (propellant) 100%
- 2. Industrial Spray Application For Leather

For spray application, any equipment capable of delivering a wet spray to the leather surface is satisfactory. Spray equipment must be equipped with local exhaust ventilation.

4. REACTIVITY DATA

STABILITY: Stable INCOMPATIBILITY - MATERIALS TO AVOID: Pressurizable equipment that contains aluminum or zinc parts. HAZARDOUS POLYMERIZATION: Will Not Occur HAZARDOUS DECOMPOSITION PRODUCTS: Thermal decomposition may produce toxic materials including HF and HC1.

3. ENVIRONMENTAL INFORMATION

SPILL RESPONSE:

Observe precautions from other sections. Ventilate. Cover with absorbent material. Collect spilled material. Place in a U.S. DOT approved container and seal.

RECOMMENDED DISPOSAL:

Reclaim solvent if feasible. Disposal alternative: Mix with flammable material and incinerate in an industrial or commercial facility. Combustion products will include HF and HCl. Since regulations vary. consult applicable regulations or authorities before disposal. U.S. EPA Hazardous Waste No.: None

temperature before using. Do not use this product in equipment with aluminum or zinc (galvanized) parts. Contact with aluminum or zinc in a pressurizable fluid system may result in an explosion.

***The LEL and UEL listed are for 1,1,1-trichloroethane.
1,1,1-trichloroethane is considered non-flammable and non-explosive under ambient temperature use conditions. A high energy source is REPRETAL DEPARTMENT.

SPECIAL PROTECTION:

EYE PROTECTION: Safety Glasses

SKIN PROTECTION: Rubber Gloves

VENTILATION: Maintain vapor levels at a minimum.

RESPIRATORY PROTECTION: NIOSH approved respirator with organic vapor cartridge and particulate filter.

SOURCE OF EXPOSURE LIMIT DATA:

- ACGIH: American Conference of Governmental Industrial Hygienists - OSHA: Occupational Safety and Health Administration

8. HEALTH HAZARD DATA

EYE CONTACT: Animal studies indicate FC-905 has a low potential for producing ocular irritation. Eye contact with FC-905 is likely to produce a very slight transient irritation.

SKIN CONTACT: FC-905 was found to be non-irritating to the skin of albino rabbits when tested according to FHSA procedures. Repeated or prolonged contact may defat the skin.

INHALATION: VAPOR MAY CAUSE RESPIRATORY IRRITATION/TEMPORARY NERVOUS SYSTEM IMPAIRMENT.MISUSE BY CONCENTRATION AND INHALATION OF VAPORS MAY CAUSE SUDDEN DEATH. Overexposure Symptoms: dizziness, nausea, headache, giddiness, loss of consciousness. May cause mild liver/kidney injury and heart rhythm disturbances.

INGESTION: The acute toxicity of FC-905 is unknown. The acute oral LD50 (rat) for 1,1,1-trichloroethane is 14.3 g/kg, which is considered practically non-toxic orally.

REMARKS:

THE FORMULA FOR THE 5 OZ WILSONS LEATHER PROTECTOR IS AS FOLLOWS:

18% PROFANE GAS
1% 3M FLOUROPOLYMER #FC3537
1% PETRULITE HYDROCARBON WAX PULYMER VYBAR
80% PHILLIPS PETRULEUM ISOCTANE (SOLTRON 10)

BEFORE WE SWITCHED TO THIS FORMULA WE AND YOUR COMPANY BOTH TESTED IT. IN ADDITION, AS ALMOST ALL OF OUR CUSTOMERS HAVE STORES IN CALIFORNIA, WE WENT OVER THE FORMULA WITH THE ASSISTANT TO THE CHEMIST WHO FORMULATED ALL OF THE PROPUSITION 65 FORMULAS FOR THE STATE OF CALIFORNIA TO MAKE SURE IT WOULD NOT REQUIRE AND PROP 65 CANCER OR BIRTH DEFECT WARNINGS, OR ANY ADDITIONAL HEALTH WARNINGS, AS CALIFORNIA HAS THE TOUGHEST HEALTH AND WARNING REGULATIONS IN THIS COUNTRY.

PROPANE GAS IS WILDLY USED INDOORS IN AREAL WHERE NATURAL GAS SERVICE IS NOT AVAILABLE FOR COOKING AND HEATING.

THE ISOCTANE SOLVENT IS USED ALL OF THE COUNTRY IN PLANTS DEGREASING EQUIPMENT AND IN MANY AEROSOL FORMULATIONS.

THE 3M SCOTCHGUARD POLYMERS ARE USED IN MILLIONS OF AEROSOL CANS, AS WELL AS IN FURNITURE FACTORIES, LEATHER TANNERIES, DRY CLEANERS ETC.

THE PETROLITE VYBAR POLYMER IS USED IN MIELIONS OF PRODUCTS, MANY THAT ARE APPLIED WITH HUMAN HANDS SUCH AS CAR POLISHES.

I WILL BE HAPPY TO PROVIDE YOU, OR THE DOCTOR IN OREGON, WITH THE NAMES AND PHONE NUMBERS OF 3M, PETHOLITE, PHILLIPS PETROLEUM, AND THE BROPANE GAS SUPPLIER. THE LABEL YOU HAVE REFERS AS REQUIRED BY LAW TO PETROLEUM DISTILLATES, ISOCTANE- BRAND NAME ISOPAR c OR SOLTRON 10 IS A PETROLEUM DISTILLATE.

JRKS:

WE WERE AND WILSONS WAS FORCED TO CHANGE THE LEATHER PROTECTOR FORMULA AS THE OLD PORMULA CONTAINED: 1,1 TRICHLOROETHANE WHICH IS BEING BANNED BY THE FEDERAL GOVERNMENT AS AN OZONE DEPLETING CHEMICAL.

WE CONSULTED WITH 3M, THEIR SPEC SHEETS LIST THE ONLY SOLVENTS THEY FIND TO BE COMPATABLE " H THE 3M FLOUROPOLYMER. OUT OF ALL OF THE SOLVENTS LISTED, ONLY TWO WERE EXEMPT FROM low PROP 65 WARNINGS OF CALIFORNIA, THEY WERE MINERAL SPIRITS AND ISOCIANE.

THE MINERAL SPIRITS TAKES EXTREMELY LONG TO DRY, AND EFFECTED SOME OF YOUR SUEDED. THE ISOCTANE DRIES FASTER THAN THE 1,1,1 TRICHLORUETHANE, HAS ALMOST NO ODOR, AND HAD NO EFFECT ON YOUR SUEDES. FROM THE INFORMATION WE RECEIVED FROM PHILLIPS PETROLEUM AND EXXON, THE ISOCTANE SEEMED TO BE THE SAFEST ALTERNATIVE FROM A HEALTH STANDPOINT.

THERE IS A PERFUME ALSO ADDED, IT IS POSSIBLE THAT SOME PEOPLE ARE ALERGIC GO PERFUMES WHICH IS WHY SOME PEOPLE PURCHASE COSTMETICS SUCH AS CLINIQUE OR ALMAY WHICH ARE PERFUME FREE.

United States Government **MEMORANDUM**

CONSUMER PRODUCT SAFETY COMMISSION Western Region

December 28, 1992 DATE:

Thelma E. Tucker FROM:

Product Safety Investigator

Western Region

SUBJECT: Illness from aerosol leather spray

Own label Distributor: Wilson's -- The Leather Experts

Minneapolis, MN

Lee Baxter, Regional Director, FOWR TO:

Thru: James DiGrazia, Supervisory Investigator

Per a quote by United Press news release that Oregon Health Sciences is alerting the public of a leather spray causing illness, I have attempted to get more specific information. The attached fax provides the present information and the formula of the product.

I appears that a new formula for Wilson's leather spray in which one or two cans are used on a new coat or other garment has caused a respiratory illness similar to chemical pneumonitis. is unsure whether the formula or a specific lot of the product is at fault. The formula is as follows:

80% Isooctane

. :

18% propane
1% 1-1-1 trichloroethane (Scotch Guard)

1% Vyvar (polymerized alpha-olefin by Petrolite)

This product has been sold nationally at over 550 stores owned by Wilson's--The Leather Experts, Minneapolis, MN. The other company names follow:

> Wilson's The Leather Experts Wilson's Suede and Leather (about 475 stores) Tannery West (~40 stores) Berman's (~20) Snyder's Leather Outlet (~20) Berman's Leather Outlet (~5) PelleCuir (~5)

> > [1]

We very the

The Oregon Health Divison and the Oregon Poison Center are investigating complaints of acute onset respiratory illness occurring shortly after use of a leather conditioning aerosol spray. Preliminary information has led the distributor to voluntarily stop sale of the product, which is distributed nationwide. At this point we are unsure if the problem is related to customer misuse, a general problem with the product's new formulation (infra), or a lot-specific problem with this new product. The information in this bulletin is preliminary and subject to change.

The individuals who contacted our Poison Center complained most commonly of coughing and shortness of breath. Some individuals reported tightness or burning in the chest, headache, malaise, and fever as high as 38.3 C (101 F). Infiltrates consistent with chemical pneumonids were noted on Xray exam of at least two patients. Symptoms began within a few minutes to two hours after use of the spray. A number of patients were examined at local emergency rooms; at least one patient was admitted. Typically, household members reported mild to moderate symptoms, including persons with no direct (i.e., same room) exposure to the spray. All of the persons who contacted the Poison Center before the media alert had used the spray indoors, or had sprayed a garment outdoors and than brought it inside to offgas. The can says (in small print): CAUTION: VAPOR MAY BE HARMFUL, but does not say anything specifically about using with adequate (or any) ventilation, etc.

The product in question is WILSON'S LEATHER PROTECTOR, sold in 5 oz. black aerosol cans with red and white lettering. The Universal Product (bar) code number is 00189 96003. This product is sold nationally at over 550 stores, all owned by Wilson's—The Leather Experts, Minneapolis, MN. The company operates stores under several different names: Wilson's—The Leather Experts, Wilson's Suede and Leather (together about 475 stores), Tannery West (~40 stores), Berman's (~20), Snyder's Leather Outlet (~20), Berman's Leather Outlet (~5), and PelleCuir (~5). A date code is stamped on the bottom of each can, but apparently shows only the month of manufacture.

The 5 oz. cans are a new formulation of Wilson's Leather Protector, which previously was sold in 7 oz. cans of very similar appearance. According to company representatives, the new formulation is made specifically for Wilson's, and contains 80% isococtanc, 18% propane, 1% 1-1-1 trichloroethane (ScotchGuard), and 1% Vyvar (polymerized alpha-olefin by Petrolite). Wilson's stores have been receiving the new product over the past couple of weeks, and have been putting it on the shelves as the old product was exhausted. In the Portland area, this occurred on or about 20, 24, and 26 December in the three stores polled. Typically, one or two cans are sold to persons buying leather coats or other outerwear, and customers are directed to treat their coats before wearing them. According to a regionalisales representative, a very large proportion of the annual sales are Christmas presents, so it is reasonable to assume that many persons with new leather clothing are just in the last day or two getting around to using the spray.

~ 20

Degan Poison Center received one related call on December 23, two on the 25th, and two on the 26th. The Oregon Health Division was notified at 0800 PST sunday the 27th. Over 20 calls were received on Sunday the 27th, most of them after the first media alert at 1700. As of 2300 Sunday more than 80 reports of illness in more than 30 households had been logged. We have learned of cases being reported to Poison Centers in at least Seattle, Tacoma, San Francisco, and Denver (all but one Center contacted), but have no information about other parts of the country.

Poison Centers around the country were notified on Sunday afternoon, as were CDC Environmental Health personnel. The Oregon Health Division is investigating to determine factors associated with illness. For more information, contact Dr. Bill Keene, Oregon Health Division: 503/731-4024 or 731-4025 (voice), 503/731-4030 (after hours page), 503/731-4798 (FAX) or keene@ohsu.edu (internet e-mail).

2230 hours and awoke at 0030 hours on 01-07-93 to find the lights still on. According to the Medical Investigator's report, "She went into the living room and saw her son face down on a bean bag chair." When she found him to be unresponsive and blue around the mouth, she called 9-1-1. (See Investigator's Report, Attachment #3.) The victim was taken to Huguley Memorial Hospital ER by Med-Star Ambulance. The victim was pronounced dead on arrival. The Burleson Police collected two aerosol cans of the product and a rag that was saturated with the subject product. The victim's grandfather was briefly interviewed by telephone. He indicated that the victim had been using the rag to clean his leather items appropriately since he received them. He indicated that the police had taken the cans of leather protector and the rag. This investigator called the Burleson Police and was told that the items involved had all been turned over to the Tarrant County Medical Examiner's office to assist in their determination. The victim appears to have died from massive respiratory failure from inhaling large amounts of the subject product. The victim appears to have saturated the rag for the purpose of breathing the vapors.

Dallas Satellite Office -FOWR

PRODUCT IDENTIFICATION:

The product in this case was the 7 ounce size, WILSONS brand, aerosol leather protector. The front panel was labeled in part as follows:

"*** SUEDE & LEATHER *** WILSONS *** SINCE 1899 *** LEATHER PROTECTOR *** MAKES SUEDE AND LEATHER STAIN AND WATER RESISTANT *** KEEPS DIRT ON THE SURFACE FOR EASY WIPE OFF *** NEVER CHANGES COLOR OR ADVERSELY EFFECTS MATERIAL *** CONTAINS NO SILICONE *** CAUTION: VAPER MAY BE HARMFUL CONTENTS UNDER PREASURE. READ CAREFULLY OTHER CAUTION ON BACK PANEL. *** NET WT. 7 OZ. ***"

The back panel was labeled in part as follows:

"****CO2 PROPELLANT *** NO FLUOROCARBONS ***

CAUTION: CONTAINS 1,1,1 TRICHLOROETHANE. KEEP AWAY FROM HEAT, SPARKS AND OPEN FLAME. DO NOT PUNCTURE OR INCINERATE (BURN) CONTAINER. EXPOSURE TO HEAT OR PROLONGED EXPOSURE TO SUN MAY CAUSE BURSTING. *** AVOID BREATHING OF VAPOR OR SPRAY MIST. AVOID CONTACT WITH SKIN OR EYES. IF SPRAYED IN EYES, FLUSH THOROUGHLY WITH WATER. CALL PHYSICIAN IMMEDIATELY USE WITH ADEQUATTE VENTILATION. *** KEEP OUT OF REACH OF CHILDREN *** MANUFACTURED FOR: *** SUEDE & LEATHER *** WILSONS *** SINCE 1899 *** MINNEAPOLIS, MN 55426 SKU

The Medical Examiner was visited and interviewed concerning this case and it appeared that the victim's lungs contained more of the products chemicals than might be expected under normal use. The Autopsy Report had not yet been completed and will be forwarded on receipt.

STANDARDS INFORMATION:

There are no applicable Federal Standards for this product.

SOURCE OF ACTIVITY/BACKGROUND

On 01/07/93 at 0026 hrs. I (Officer Polley#302) was dispatched to 484 lrene in reference to an unconcious person who was not breathing.

OFFICERS OBSERVATION/INVESTIGATION

Upon arrival 1 and Officer Eakins were met at the front door of the residence by Com/Cole who is V/Twaddle mother. Com/Cole was hysterical and yelling at us to hurry and help her son.

Jeon making entry into the residence Officers observed V/Twaddle Jaying on his back in the living room with his head towards the front door and his feet towards the back door of the residence. Upon checking vital signs on v/Twaddle none could be found at which time Officers began conducting C.P.K.

DATE 01/07/93

OFFICERS OBSERSVATION/INVESTIGATION (CONTINUED)

V/Twaddle was blue in facial color however warm to the touch. Officers continued C.P.R. until Medstar and Fire Dept. personel arrived and took over the scene. V/Twaddle never regained conclousness or showed any vital signs when given medical treatment. V/Twaddle was then transported to Huguley Hospital by Medstar ambulance.

Officers then met with Com/Cole who advised that she had went to bed on 01/06/93 @2230 hrs. and the last time she saw her son (V/Twaddle) he was watching television. When she awoke she went out to the living room because she saw the lights on and discovered V/Twaddle in affetal position on his knees and head with a video tape in his hand like he was attempting to put in the video tape when he was suddenly striken with the unknown problem. Com/Cole then advised she rolled him over onto his back and discovered that he was not breathing and was unconcious at which time she called 911. Com/Cole also advised that V/Twaddle had been home all day and did not have any visitors to her knowledge and that he did not have any medical problems and was not taking any medication.

I then went to Huguley Hospital were I met with Dr. Tim Curran who advised me that V/Twaddle did not survive and at this time did not know the cause of death and that Tarrant Co. Medical Examiners office was enroute to the hospital.

Upon Tarrant Co. Medical Examiner arrived I met with Investigator Bill Young and advised him of what I had observed and heard up to that point. I was then called by Cpl. Carson #323 who advised that V/Twaddle may have been inhaling leather cleaner at which time I relayed that information to Mr. Young.

PRE-EVENT

This injury incident involved a 26 year old female who lives at home with her husband and children in Phoenix, Arizona. Prior to this incident she was in very good physical and mental condition with no abnormalities.

The victim told me that she had never experienced any breathing problems during the past. However, the victim stated that she has been a smoker for about ten (10) years.

During Wedneday, December 23, 1992, the victim went to a retail store in Phoenix and bought a new leather jacket. The store salewoman strongly encouraged her to purchase a 5 oz. spray can of leather conditioner for the jacket, see photos # 3 & 4.

The victim bought both the jacket and the leather conditioner. She showed me her sales receipt. It listed her purchase of "outerwear" for \$99.99 and a purchase of "spray" for \$4.99.

According to the victim, the saleswoman suggested that she only spray 1/2 of the contents of the can of leather conditioner on the jacket at one time. She took the products home.

The victim decided to use the conditioner on the leather jacket that night around 9:00 P.M. She hooked the leather jacket's hanger on the top outside edge of the shower door in the master bathroom, see photo # 1 & 2. They have an open entry way from the master bedroom into the master bathroom. It is not closed off by a door. There is plenty of ventilation in this part of the house, see photo # 1.

She read the instructions on the spray can, see photos # 5 & 6. The victim shook the can and began applying the spray to the outside of the leather jacket. She held the can unright at a distance of about 8 or 9 inches away from the jacket.

She lightly covered both sides of the jacket. The victim indicated that she did not use very much of the can's contents.

EVENT

The victim began experiencing breathing problems within 15 - 20 minutes of spraying her leather jacket.

POST-EVENT

She began gasping for air and started coughing heavily. The victim thought that she might be coming down with a cold. She took a shower and attempted to go to sleep.

262

PAGE 3

The victim continued to experience breathing problems and sharp pains in her side. She told me that her body began reacting as if she had taken a laxative. The victim had to go to the bathroom several times. She said she was losing body fluids.

She indicated that the breathing problems continued and caused her to have problems going to sleep, even after she took overthe-counter sleeping medication.

She found out that her shortness of breath was more pronounced when laying down. It was easier to breath when she sat up.

The victim went to see her family physician the next morning at 8:30 A.M. The victim said she had started coughing up blood by the time she arrived at the doctor's office.

The physician examined her pulmonary functions and used a breathing apparatus to check her lungs. He told she that she was only able to use $1/4\,-\,1/2$ of her lung capacity.

She said the physician gave her a shot of steroids and provided her with some medication which reduced the irritation to her lungs and improved her ability to breath.

She visited the physician again on December 29, 1992. At that time he told her that her lungs had improved but she was still not able to use 100% of her breathing capability.

Copies of the victim's medical records are attached as exhibit # 4.

The victim is concerned this incident with the leather conditioner. may have caused her to suffer some permanent lung damage. She said that she still suffers occasional sharp pains and minor breathing problems.

She contacted the manufacturer's corporate offices and told the personnel about her breathing problems when she used their 5 oz. spray can of leather conditioner. She said that the manufacturer did not appear to be very interested in her problem so she notified the U.S. Consumer Product Safety Commission about this incident.

I met with the victim at her home and took photographs of the injury scene as well as the spray can of leather conditioner.

PRODUCT IDENTIFICATION

This incident involved a 5 oz. spray can of leather conditioner from Wilsons, Minneapolis, MN 55426, phone # 612/ 541-3308 or 541-3422.

The victim purchased this product during 12-23-92 at Wilson's Suede & Leather, Paradise Valley Mall, Phoenix, Arizona.

This product is sold in a black can with red and white lettering. Front panel labeling includes the following (see photo # 5):

SUEDE & LEATHER
WILSONS
SINCE 1899
LEATHER
PROTECTOR
MAKES SUEDE AND LEATHER

STAIN AND WATER RESISTANT KEEPS DIRT ON THE SURFACE FOR EASY WIPE-OFF NEVER CHANGES COLOR OR ADVERSELY AFFECTS MATERIAL

Dear Mrs. Gilmore:

As an agency of the Federal Government, the U. S. Consumer Product Safety Commission (CPSC) is responsible for investigating consumer product related injuries and deaths and potential injury situations. These investigations help make us aware of hazards to children and adults and aids us in preventing similar incidents from occurring to other people.

We are interested in obtaining information about the breathing problems you experienced after using Wilson's Leather Protector spray on your leather jacket. If the spray can is still available, I would appreciate your holding it along with any accompanying manuals, labeling, packaging, etc. This will allow me to examine and photograph the product.

CPSC enforces the federal safety regulations covering consumer products such as household appliances, chemical sprays and household cleaners, children's products, and power tools. continually investigating deaths and injuries in an attempt to examine hazards and notify the public of potential dangers.

For your convenience, a self-addressed envelope is enclosed along with information about CPSC. If you have any questions please feel free to call me at 602/ 379-3510.

> Sincerely Mr. Zannie E. Weaver Federal Investigator

Dear Sir:

This is a written request for copies of your medical records and any evaluations covering the treatments received by Mrs. Huong-Gilmore, of 2710 N. 89th-Drive, Phoenix, Arizona, because of the adverse reactions she suffered after using a spray can of leather conditioner during December 1992.

An Authorization for Medical Records Disclosure signed by Mrs. Gilmore is enclosed.

Dozens of people have sought medical assistance after using this product. We are interested in obtaining as must information as possible about the adverse reactions suffered by the consumer.

As an agency of the Federal Government, the U.S. Consumer Product Safety Commission (CPSC) is responsible for investigating consumer product related injuries and deaths under Section 5, 16 and 29 of the Consumer Product Safety Act (Public Law 92-573; 15 U.S.C. 2054 and 3065). In addition, CPSC enforces the federal safety regulations covering consumer products such as household chemical products, power tools, household appliances, and children's products.

For your convenience, a self-addressed envelope is enclosed along with information about CPSC. If you have any questions please feel free to call me at 602/ 379-3510.

Mr. Zarnie Federal Investigator
